Conveyor Belts	Fixtures	Staff Rooms	Bathrooms	Spas

EURO 4000

Steam Effectiveness

High temperature steam (vapour) softens the grease, oils, fat, etc., that binds grime and stains onto or into surfaces. The intense pressure then blasts the dirt away, quicker and easier than the old abrasive methods.

Steam is the proven world's best solution for cleaning grout and tiles. Glass and polished surfaces, like stainless steel, are left gleaming and streak free. In fact steam is effective on most surfaces in and around the home, but be warned to be effective, a steamer must supply a constant high pressure.

The EURO 4000, with 4.5 bar pressure and its huge, 4 litre boiler, will give approximately an hours cleaning, far more than most models.

THE EURO 4000 unlike other steamers in this price range, is designed for the worker, not just the household. The solid construction and wide range of extras make this steamer ideal for the contractor or workshop

EFFICIENT PERFORMANCE

Lower water usage.

By using steam vapour to clean, you dramatically reduce water consumed in everyday tasks. One litre of water converts to over 1500 litres of steam vapour

Reduce chemical costs & contamination

Most cleaning chores can be achieved by steam without the use of expensive and often toxic chemicals. The extreme temperature of steam sanitises as it cleans, again reducing costs

Safe

The EURO 4000 features a pressure switch, a relief valve, thermo switch and water level indicator alarm.
